Re: "FAA DOCKET NO FAA-2003-15495" - 524

To Whom It May Concern:

I am writing to express my deep concern and anger over the Federal Aviation Administration's plans to increase the size and weight of aircraft that are able to land at Teterboro Airport (Docket No. FAA-2003-15495, Federal Register Volume 68, Section 126, dated July 1, 2003) in New Jersey.

Any increase in the size of the aircraft allowed to land at this very small airport, which is located in the middle of a very densely populated area, holds a potentially dangerous safety hazard to the hospital, schools, and homes in the very immediate and surrounding areas. It will have a devastating impact on the quality of life for all those who live in the immediate area and its surrounding communities.

There are three surrounding area airports (LaGuardia, JFK, and Newark) that are more capable of handling the larger aircrafts not located so close to residential areas - they do not need to use Teterboro Airport.

We urge you to please review and rescind this unacceptable and unsafe change in weight limitations in this most densely populated area.

Thank you for your consideration in this matter.

Sincerely,

Weight-Based Restrictions at Airports: Proposed Policy

To Whom It May Concern:

I am writing to express my strong opposition to the Federal Aviation Administration's proposed policy to lift weight restrictions at airports throughout the United States. This change in policy would negate the 100,000 lb weight restriction that has been in effect at Teterboro Airport, Teterboro, Bergen County, NJ, for the past 36 years. The primary reason for the current restriction is to limit the types of planes permitted at Teterboro in an attempt to balance the airport's operations with the quality of life needs of the surrounding communities. The Port Authority of NY & NJ, the owner of TEB, operates a system of airports, namely, Newark International, JFK International, and LaGuardia, which already serve the commercial and large jet aviation travel need dictated by the residents and businesses of the region. Teterboro Airport is a general aviation reliever airport that accommodates smaller, private aircraft.

Teterboro Airport sits in the middle of the most densely populated county in the most densely populated State in the country. It is totally surrounded by residential communities, and its operations are already having an adverse effect on the safety of the residents living in this area. There have been two airplane crashes over the past 4 years, and low flying jets present a daily hazard to high-rise apartment buildings as well as to Hackensack University Medical Center. Most of the communities in the area are staffed by volunteer fire departments, which are not equipped to handle a Boeing 737 crashing into a residential development, a school, or a hospital. Changing the weight restrictions would adversely affect the Port Authority's crash, fire and rescue procedures. The safety and health of the residents greatly outweighs the "needs" of the Boeing Corporation marketing its Business Jet.

As an aside, it should be noted that the FAA upheld the weight restriction in place at Teterboro Airport as recently as March 2002. I urge you to review and rescind this unacceptable and unsafe change in policy.

Re: "FAA DOCKET NO FAA-2003-15495"

To Whom It May Concern:

I am writing to express my deep concern and anger over the Federal Aviation Administration's plans to increase the size and weight of aircraft that are able to land at Teterboro Airport (Docket No. FAA-2003-15495, Federal Register Volume 68, Section 126, dated July 1, 2003) in New Jersey.

Any increase in the size of the aircraft allowed to land at this very small airport, which is located in the middle of a very densely populated area, holds a potentially dangerous safety hazard to the hospital, schools, and homes in the very immediate and surrounding areas. It will have a devastating impact on the quality of life for all those who live in the immediate area and its surrounding communities.

There are three surrounding area airports (LaGuardia, JFK, and Newark) that are more capable of handling the larger aircrafts not located so close to residential areas – they do not need to use Teterboro Airport.

We urge you to please review and rescind this unacceptable and unsafe change in weight limitations in this most densely populated area.

Thank you for your consideration in this matter.

Sincerely,

To Whom It May Concern:

I am writing to express my deep concern over the Federal Aviation Administration's plans to increase the size and weight of aircraft that are able to land at Teterboro Airport (Docket No. FAA-2003-15495, Federal Register Volume 68, Section 126 dated July 1, 2003) in New Jersey.

Any increase in the size of aircraft allowed to land at this small airport holds a potentially dangerous safety hazard as well as a devastating impact on the quality of life for the entire area and surrounding communities.

We urge you to please review and rescind this unacceptable and unsafe change in weight limitations in this most densely populated region.

Sincerely,

Signature

Re: Docket No. "FAA Docket No. FAA-2003-15495"

To whom it may concern:

The most recent proposal (Docket FAA-2003-15495) to disregard weight limits at Martin County Airport (Witham Field) is being badly received by already beleaguered residents who feel:

SAFETY AND PROXIMITY MUST BE OVERRIDING CONSIDERATIONS

13,500 residents live within a mile and a half of the airport. Also within that area are schools, daycare centers, the Blake Library, soccer fields, administrative headquarters, the YMCA and many, many other buildings where people congregate. Safety is paramount.

ALREADY EXISTING AIRCRAFT WEIGHT LIMITS INAPPROPRIATE

At present Witham Airport has two 737's flying in and out. We have heard that there have been two instances, one over run into a berm and another potential over run which resulted in blowing out of tires. That's too close for comfort for homes nearby and a heavily traveled road.

QUALITY OF LIFE ISSUES DO COUNT

Stuart and Martin County residents cannot withstand another assault delivering ever increasing bigger and more frequent jets. As it is now the whole character of the airport changed in 1998 with the lengthening of a runway and subsequent arrival of jet aircraft. Collateral damage includes the destruction of thousands of trees and the loss of sound buffers.

ECONOMIC EFFECT COULD BE DISASTROUS

Martin County is beginning a process of buying out homes or retrofitting them if they are in the 60-65 DNL footprint. More and larger jets will increase the number of home affected. The next homes will be in the million and multi million dollar river front areas. Money has not been forthcoming from FAA and is now to be paid for with ad valorem funds. The county cannot continue to finance this as an ongoing procedure.

For all of the above considerations, and many more, plus a possible devastating domino effect with unknown consequences, outraged residents feel this initiative must be abandoned.

Respectfully,

Ellie and Don Bills

Re: Docket No.FAA-2003-15495

Weight-Based Restrictions at Airports: Proposed Policy

To Whom It May Concern:

I am writing to express my strong opposition to the Federal Aviation Administration's proposed policy to lift weight restrictions at airports throughout the United States. This change in policy would negate the 100,000 lb weight restriction that has been in effect at Teterboro Airport, Teterboro, Bergen County, NJ, for the past 36 years. The primary reason for the current restriction is to limit the types of planes permitted at Teterboro in an attempt to balance the airport's operations with the quality of life needs of the surrounding communities. The Port Authority of NY & NJ, the owner of TEB, operates a system of airports, namely, Newark International, JFK International, and LaGuardia, which already serve the commercial and large jet aviation travel need dictated by the residents and businesses of the region. Teterboro Airport is a general aviation reliever airport that accommodates smaller, private aircraft.

Teterboro Airport sits in the middle of the most densely populated county in the most densely populated State in the country. It is totally surrounded by residential communities, and its operations are already having an adverse effect on the safety of the residents living in this area. There have been two airplane crashes over the past 4 years, and low flying jets present a daily hazard to high-rise apartment buildings as well as to Hackensack University Medical Center. Most of the communities in the area are staffed by volunteer fire departments, which are not equipped to handle a Boeing 737 crashing into a residential development, a school, or a hospital. Changing the weight restrictions would adversely effect the Port Authority's crash, fire and rescue procedures. The safety and health of the residents greatly outweighs the "needs" of the Boeing Corporation marketing its Business Jet.

As an aside, it should be noted that the FAA upheld the weight restriction in place at Teterboro Airport as recently as March 2002. I urge you to review and rescind this unacceptable and unsafe change in policy.

Sincerely,

Ref: "Docket No. FAA-2003-15495"

Gentlemen;

We live on a daily basis with the unbelievable noise from jets directly over our house at low altitudes.

It is an outrage that the FAA would suggest raising the weight limits for jets using our St. Lucie County International Airport, creating larger jets and more noise.

We have an intolerable situation now with Lear 25 noise and other jets, in addition to noisy cargo planes and repetitive flight school touch-and-go planes.

Our town is on the National Registry of Historic Places with homes dating back to the 1900's and one to the 1850's.

Please do not force weight limits on this airport, to the detriment of our quality of life here in St. Lucie Village.

Sincerely,

Mrs Robert Barclay

It is totally surrounded by residential communities, and its operations are already having an adverse effect on the safety of the residents living in this area. There have been two airplanes crashes over the past 4 years, and low flying jets present a daily hazard to high-rise apartment buildings as well as to Hackensack University Medical Center. Most of the communities in the area are staffed by volunteer fire departments, which are not equipped to handle a Boeing 737 crashing into a residential development, a school, or a hospital. Changing the weight restrictions would adversely effect the Port Authority's crash, fire and rescue procedures. The safety and health of the residents greatly outweighs the "needs" of the Boeing Corporation marketing its Business Jet.

As an aside, it should be noted that the FAA upheld the weight restriction in place at Teterboro Airport as recently as March 2002. I urge you to review and rescind this unacceptable and unsafe change in policy.

Sincerely,

Re: Docket No.FAA-2003-15495

Weight-Based Restrictions at Airports: Proposed Policy

To Whom It May Concern:

I am writing to express my strong opposition to the Federal Aviation Administration's proposed policy to lift weight restrictions at airports throughout the United States. This change in policy would negate the 100,000 lb weight restriction that has been in effect at Teterboro Airport, Teterboro, Bergen County, NJ, for the past 36 years. The primary reason for the current restriction is to limit the types of planes permitted at Teterboro in an attempt to balance the airport's operations with the quality of life needs of the surrounding communities. The Port Authority of NY & NJ, the owner of TEB, operates a system of airports, namely, Newark International, JFK International, and LaGuardia, which already serve the commercial and large jet aviation travel need dictated by the residents and businesses of the region. Teterboro Airport is a general aviation reliever airport that accommodates smaller, private aircraft.

Teterboro Airport sits in the middle of the most densely populated county in the most densely populated State in the country. It is totally surrounded by residential communities, and its operations are already having an adverse effect on the safety of the residents living in this area. There have been two airplanes crashes over the past 4 years, and low flying jets present a daily hazard to high-rise apartment buildings as well as to Hackensack University Medical Center. Most of the communities in the area are staffed by volunteer fire departments, which are not equipped to handle a Boeing 737 crashing into a residential development, a school, or a hospital. Changing the weight restrictions would adversely effect the Port Authority's crash, fire and rescue procedures. The safety and health of the residents greatly outweighs the "needs" of the Boeing Corporation marketing its Business Jet.

As an aside, it should be noted that the FAA upheld the weight restriction in place at Teterboro Airport as recently as March 2002. I urge you to review and rescind this unacceptable and unsafe change in policy.
